

resale.com.pk Digital Brand and UI Guidelines

Version 1.3 (3 October 2026)

Web, mobile, print and partner brand implementation standard

Version: 1.3 (3 October 2026)

Status: Approved logo, approved logo lockup (U6 "folded underline"), and recommended digital implementation standard

Applies to: Website, responsive web, mobile apps, PWA, internal product interfaces, design systems, marketing, print, and partner materials

Visual reference: [previews/brand-u6.html](#) shows every rule below applied in context.

Instructions for AI agents

Treat this file as the implementation source of truth for resale.com.pk digital brand and UI work.

- Preserve the approved symbol geometry. Do not redraw, rotate, mirror, stretch, rearrange, or recolor it.
- When the brand name appears with the symbol, use the approved **U6 lockup** (section 2.2) from `logo/lockup/`. Do not retype or restyle the brand name as a logo. The orange underline, its fold, and the smaller grey `.com.pk` are part of the approved design, not decoration to remove.
- Use semantic design tokens instead of scattering raw values through product code.
- Use teal for trust and primary interaction, orange for selective commercial emphasis, neutrals for content, and semantic colors for system meaning.
- Meet WCAG AA at minimum. Do not rely on color alone to communicate state, status, selection, or action.
- Preserve marketplace information density and hierarchy. Do not hide important product, price, condition, seller, verification, warranty, location, or availability information merely to make a layout look minimal.
- Do not invent logo variants, palette values, typefaces, claims, taglines, or brand language not defined here.
- If an implementation requirement conflicts with accessibility, product clarity, or platform conventions, preserve accessibility and clarity and flag the deviation for review.
- Color and gradient values in this file are **normalized digital palette values derived from the approved raster logo**. They are not claimed as original vector-source values.
- Production logo files live in `logo/` (section 17). Use them as supplied; regenerate derived files with the scripts in `tools/` rather than editing exports by hand.

1. Brand direction

resale.com.pk is a technology marketplace covering laptops, desktops, servers, phones, tablets, components, and accessories across new, refurbished, and used conditions.

Attribute	Direction
Trustworthy	Clean, structured, credible
Modern	Contemporary, but not futuristic

Attribute	Direction
Technical	Appropriate for a technology marketplace
Accessible	Easy for mainstream users to understand
Commercial	Strong enough for buying, selling, and price comparison
Professional	Suitable for established shops and serious buyers
Friendly	Not corporate or intimidating
Distinctive	Avoid generic marketplace and AI visual clichés

The interface must not look like an AI product, crypto product, gaming product, or overly futuristic startup. The logo's interlocking structure may influence modular layouts, rounded geometry, and interconnected elements, but must not be copied repeatedly as decoration.

2. Official logo

The logo has two approved forms: the **symbol** on its own, and the **lockup** (symbol plus wordmark).

2.1 Symbol

The symbol comprises four interconnected ribbon-like forms in Resale Teal and Resale Orange, arranged as a pointy-top hexagon built from vertical sides and 30° diagonals. It can function independently (app icon, favicon, avatars). Do not insert the brand name into it.

The SVG master `logo/resale-logo-master.svg` is traced 1:1 from the approved raster artwork and preserves its silhouette, internal negative spaces, ribbon overlaps, rounded corners, teal/orange relationship, proportions, and fold shading. All other symbol files are generated from it. Do not use the original AI-generated raster as a production source.

2.2 Lockup (U6 "folded underline")

When the brand name appears with the symbol, use the U6 lockup. The domain name is always written in full, lowercase:

resale.com.pk

"resale" leads; ".com.pk" is set smaller but must always be present, because the full address is what people type and resale.com / resale.pk are not owned by the brand. One orange stroke with a ribbon fold underlines "com.pk" and ties the name to the symbol.

Construction (N = name size; every value scales with N):

Element	Rule
Name "resale"	Inter 700, letter-spacing -2% (-0.02 N), Teal 800 #024E53 , size N
Domain ".com.pk"	Inter 700 at 0.7 N, same letter-spacing, Slate 500 #64748B , on the name's baseline. The full stop is an ordinary full stop in the domain colour.
Underline	Under "com.pk" only (not under the full stop). Thickness $0.14 \times$ domain size (≈ 0.1 N), never below 2px. Gap between text box and stroke equals the thickness. Both ends cut at 30° from vertical (offset = thickness $\times$ tan 30°), matching the symbol's hexagon sides. Orange 600 #FD7009 .
Fold	A tab folding down beneath the stroke's right end, Orange 700 #E55106 . Width $0.308 \times$ domain size, depth $0.364 \times$ domain size; its lower edge slopes up from left to right.
Symbol	Height 1.55 N, vertically centred on the name, gap 0.42 N to the name.
Stacked version	Symbol 2.6 N, centred above the wordmark, gap 0.5 N.
Clear space	At least $0.25 \times$ symbol height on every side.

Versions:

Version	Use	File
Horizontal, full colour	Default: headers, documents, most placements	logo/lockup/resale-lockup.svg
Header (pixel-fitted)	Website headers, mobile app bars, login page and email, 28–48px tall. Small-size optical version: see below.	logo/lockup/resale-lockup-header-{28,32,36,40,42,44,48}(-dark).svg + 1×/2×/3× PNG
Horizontal, flat symbol	Optional, only where gradients cannot be reproduced (e.g. some print methods)	logo/lockup/resale-lockup-small.svg
Horizontal, dark	Dark surfaces and dark mode: white symbol and name, Slate 400 #94A3B8 domain, orange stroke and fold kept	logo/lockup/resale-lockup-dark.svg
Horizontal, on teal	Teal 800 surfaces: as dark, with Teal Soft 2 #CCDCDD domain	logo/lockup/resale-lockup-on-teal.svg
One colour, ink / white	Receipts, stamps, engraving, embroidery, reversed print. Stroke and fold take the same single colour.	resale-lockup-ink.svg , resale-lockup-white.svg
Stacked	Square spaces: splash screens, stickers, posts	resale-lockup-stacked*.svg
Wordmark only	When the symbol already appears nearby	resale-wordmark*.svg

Lockup files are outlined (no font dependency). Each has a 1200px transparent PNG beside it (header files have exact 1×/2×/3× PNGs instead).

The lockup always uses the **detailed full-gradient symbol**, at every size and on every device, including mobile headers. The flat symbol is only for the standalone symbol at favicon sizes (section 10).

Header lockup (small optical size)

At header sizes the master proportions look cramped and the thin stroke falls between pixel rows. The header files are drawn for 28–44px height and differ from the master only in these optical adjustments:

Element	Master	Header version
Name letter-spacing	−2%	−0.5%
".com.pk"	Inter 700 at 0.7 N, −2%	Inter 600 at 0.72 N , +1.2% letter-spacing
Symbol gap	0.42 N	0.45 N
Baseline, stroke, fold	Proportional	Snapped to whole pixels; stroke never under 2px

Use a header file at its exact size: set the `<img>` height to the number in the filename (e.g. `height="36"`) and let the width follow. Do not scale it with CSS transforms, do not use fractional sizes, and do not set `shape-rendering="crispEdges"`. Native apps use the @2x/@3x PNGs at the matching point size.

Width caps: `header-36` is at most **180px** wide and `header-28` at most **140px**, so the lockup fits beside three 44px buttons on phones (screen width − 180px). To meet the cap, the symbol gap and name letter-spacing are tightened slightly; nothing else changes.

Header file	Size (W × H)
<code>header-28</code>	140 × 28
<code>header-32</code>	161 × 32
<code>header-36</code>	180 × 36
<code>header-40</code>	203 × 40
<code>header-42</code>	212 × 42
<code>header-44</code>	223 × 44
<code>header-48</code>	243 × 48

Email cannot use SVG: use `resale-lockup-header-42@2x.png` (or `@3x`) displayed at 212 × 42, on a white header. The PNGs are transparent; do not place them on dark email backgrounds (use the `-dark` PNG there). In live web UI the lockup may be built in HTML/CSS only if it matches this construction exactly; the reference implementation is the `.wm` / `.lockup` CSS in `previews/brand-u6.html`. Otherwise use the SVG.

3. Core brand colors

Resale Teal

Token	HEX	RGB	Recommended use
Teal 900	<code>#013E43</code>	1, 62, 67	Deep shadow and pressed states
Teal 800	<code>#024E53</code>	2, 78, 83	Primary brand color

Token	HEX	RGB	Recommended use
Teal 600	#027B7F	2, 123, 127	Links, highlights, lighter brand use
Teal Soft	#E6EDEE	230, 237, 238	Subtle teal background
Teal Soft 2	#CCDCDD	204, 220, 221	Selected and hover backgrounds

The main solid digital brand color is #024E53 .

Resale Orange

Token	HEX	RGB	Recommended use
Orange 700	#E55106	229, 81, 6	Deep logo orange
Orange 600	#FD7009	253, 112, 9	Primary accent
Orange 500	#FE8D14	254, 141, 20	Highlight and gradient
Orange Soft	#FFF1E6	255, 241, 230	Accent background
Orange Soft 2	#FFE2CE	255, 226, 206	Stronger accent background
Orange Text	#C2410C	194, 65, 12	Accessible orange text on white

The primary solid accent is #FD7009 . Orange is an accent, not the dominant UI color.

Normalized logo gradients

```
/* Teal */
linear-gradient(
  135deg,
  #027B7F 0%,
  #024E53 55%,
  #013E43 100%
);

/* Orange */
linear-gradient(
  135deg,
  #FE8D14 0%,
  #FD7009 55%,
  #E55106 100%
);
```

Reserve gradients for the official full-color logo, large brand graphics, hero illustrations, and selected promotional graphics. Use solid brand colors for routine buttons, fields, cards, and navigation.

Color hierarchy

Color family	Approximate visual share	Role
White and neutrals	70%	Content, surfaces, and whitespace
Teal	20%	Trust, structure, and primary interaction
Orange	10%	Commercial emphasis and selective accent

This ratio expresses hierarchy rather than a mathematical requirement.

Within the logo, orange appears only in the symbol and in the lockup's underline (Orange 600) and fold (Orange 700). Do not add further orange to the wordmark.

4. Neutral and semantic colors

Neutral UI palette

Token	HEX	Recommended use
Ink 950	#0F172A	Primary text and prices
Ink 800	#1E293B	Secondary headings
Slate 700	#334155	Secondary text and default icons
Slate 500	#64748B	Muted text
Slate 400	#94A3B8	Placeholder and disabled text
Slate 300	#CBD5E1	Strong borders
Slate 200	#E2E8F0	Default borders
Slate 100	#F1F5F9	Secondary backgrounds
Slate 50	#F8FAFC	Page and surface backgrounds
White	#FFFFFF	Cards and primary surfaces

Semantic colors

Purpose	Main	Soft background	Text
Success	#15803D	#F0FDF4	#166534
Warning	#B45309	#FFFBE8	#92400E
Error	#B91C1C	#FEE2F2	#991B1B
Information	#1D4ED8	#EFF6FF	#1E40AF

Do not use Resale Orange for errors. Orange belongs to the brand and commercial accent system; red communicates errors and destructive actions.

5. Accessibility and contrast

All interfaces must target **WCAG AA** at minimum.

Background	Text	Approximate contrast	Status
#024E53	#FFFFFF	9.47:1	Excellent
#013E43	#FFFFFF	11.86:1	Excellent
#027B7F	#FFFFFF	5.07:1	AA
#FD7009	#0F172A	6.37:1	AA
#FE8D14	#0F172A	7.68:1	AA
#C2410C	#FFFFFF	5.18:1	AA

Do not place normal-size white text on #FD7009 . For a bright orange button, use #0F172A text. If white text on orange is required, use #C2410C as the background.

Do not use color as the only indicator for errors, selected states, verification, condition, or availability. Add a label, icon, check, border, or other perceivable state change.

6. Buttons, links, focus, and forms

Buttons

Variant	Background	Text	Border	Hover
Primary	#024E53	#FFFFFF	Transparent	#013E43
Secondary	#FFFFFF	#024E53	#024E53	#E6EDEE background
Orange accent	#FD7009	#0F172A	Transparent	#E55106

- Use teal for the standard primary CTA: View Offers, Compare Prices, Contact Seller, Continue.
- Use orange selectively for promotions or seller-oriented actions.
- Do not give teal and orange buttons equal visual importance beside each other without a clear hierarchy.
- Recommended radius: 10px .
- Recommended weight: 600 .

Links

```
a {
  color: #027B7F;
}

a:hover {
  color: #024E53;
}
```

Use an underline on hover or focus where appropriate. Do not depend only on color to distinguish actionable text.

Focus

```
:focus-visible {
  outline: 2px solid #027B7F;
  outline-offset: 2px;
}
```

Use a white or otherwise contrasting focus ring on teal surfaces. Never remove browser focus styling without an accessible replacement.

Form controls

State	Background	Border	Text or message
Default	#FFFFFF	#CBD5E1	#0F172A ; placeholder #64748B
Hover	#FFFFFF	#94A3B8	#0F172A
Focus	#FFFFFF	#027B7F	Teal focus ring
Error	#FFFFFF	#B91C1C	Message #991B1B
Disabled	#F1F5F9	#E2E8F0	#94A3B8

7. Marketplace-specific UI

Product condition

Condition	Background	Text
New	#E6EDEE	#024E53
Refurbished	#FFF1E6	#C2410C
Used	#F1F5F9	#475569

Use both text and color. Do not introduce a new color family for every condition or inventory state.

Verified seller

Background: #E6EDEE
Icon: #024E53
Text: #024E53
Label: Verified Shop

Verification is a trust signal and uses teal, not orange.

Prices

- Use #0F172A for the actual price.
- Use weight 700.
- Use tabular numbers.
- Use #C2410C for savings, discount percentages, or deal messaging on white.

```
.price,  
.numeric-data {  
  font-variant-numeric: tabular-nums;  
}
```

Cards

Background: #FFFFFF
Border: #E2E8F0
Radius: 12–16px
Primary text: #0F172A
Secondary text: #64748B
Desktop hover: #CCDCDD border and a very small elevation change

Product imagery remains the visual focus. Avoid heavy shadows.

Information hierarchy

A typical offer card prioritizes:

1. Product or model
2. Price
3. Condition
4. Seller

- 5. Verification
- 6. Warranty
- 7. Location
- 8. Primary CTA

Usually only one or two card areas need accent color. Orange must not compete with price, condition, verification, and CTA simultaneously.

Badges, chips, and selections

Pattern	Default	Selected or active
Filter chip	White; #CBD5E1 border; #334155 text	#E6EDEE background; #024E53 border/text
Radio or checkbox	#CBD5E1 border	#024E53 control; white check
Commercial badge	#FFF1E6 background; #C2410C text	Use sparingly
Status badge	Semantic soft background	Matching semantic text and icon

8. Radius and spacing

Radius system

Component	Radius
Small controls	8px
Inputs and buttons	10px
Standard cards	12px
Large cards and panels	16px
Modals and dialogs	16px
Pills and badges	999px

Echo the logo's rounded ribbon geometry subtly. Do not make every surface excessively rounded; the brand should remain technical and structured.

Spacing system

Use a 4px base grid with an 8px preferred rhythm.

4px
8px
12px
16px
20px
24px
32px
40px
48px
64px
80px

Avoid arbitrary spacing such as 17px , 27px , or 43px without a specific optical reason.

9. Typography

Use **Inter Variable** where supported.

Approved weights:

400 Regular
500 Medium
600 SemiBold
700 Bold

Avoid routine use of 800 and 900 .

Web typography

Role	Size	Line height	Weight
Display	48px	56px	700
H1	40px	48px	700
H2	32px	40px	700
H3	24px	32px	600
H4	20px	28px	600
Large body	18px	28px	400
Body	16px	24px	400
UI / small	14px	20px	500
Caption	12px	16px	500
Button	14–16px	20–24px	600

Mobile typography

Role	Size	Line height	Weight
H1	32px	40px	700
H2	24px	32px	700
H3	20px	28px	600
Body	16px	24px	400
Small	14px	20px	500
Caption	12px	16px	500

Do not shrink important marketplace information merely to fit more content on a screen. Buttons should generally remain at least 14px .

Brand name in headers

Use the U6 lockup (section 2.2), not a typed brand name. The wordmark is always Inter 700 regardless of the interface font in use; do not redraw it in another typeface or weight. Do not reproduce the name inside the symbol.

10. Logo sizing and clear space

Maintain clear space on every side equal to approximately **12.5% of the logo width**. No text, border, button, icon, or imagery may enter this zone.

Use	Recommended size
Desktop header	30–36px
Mobile header	28–32px
Compact navigation	24–28px
Footer	28–32px
Account or brand display	40px+
Marketing	As required by layout

Avoid the detailed logo below approximately 24px in ordinary UI.

Lockup sizes

Use	Name size N	Symbol
Desktop header	23–26px	resale-lockup-header-36 or -40
Desktop header, scrolled / compact	18–21px	resale-lockup-header-28 or -32

Use	Name size N	Symbol
Phones 360–639px wide	23px	resale-lockup-header-36 (180px wide)
Phones 320–359px wide	18px	resale-lockup-header-28 (140px wide). Keep the full lockup; do not drop to the symbol alone, because ".com.pk" must stay visible.
Login / account page	31px	resale-lockup-header-48
Email header	27px	resale-lockup-header-42@2x.png at 212 × 42
Footer and documents	18–22px	Header file of matching size, or the master lockup
Minimum	16px (domain ≈ 11px)	Below this, use the symbol alone

Micro logo

Rendered size	Artwork
33px and above	Full gradient version
16–32px	Flat two-color mark using #024E53 and #FD7009 ; no shadows or micro-gradients. Applies to the standalone symbol (favicons, tiny UI icons) only; the lockup keeps the full-gradient symbol at all sizes.
16px test failure	Dedicated simplified favicon preserving the overall silhouette

Required favicon assets

Asset	Size
Favicon	16×16
Favicon	32×32
Favicon	48×48
Apple touch icon	180×180
PWA icon	192×192
PWA icon	512×512

Do not use a blurred downscale of the large PNG. Build and test an optimized flat micro symbol.

Mobile app icon

- Use the logo symbol only.
- Use #FFFFFF or #F8FAFC as the background.
- The symbol should occupy approximately 68–72% of the canvas visually.

- Leave generous safe area.
- For iOS, provide a 1024×1024 master and do not bake rounded corners into the artwork.
- For Android, use adaptive foreground and background assets and keep essential geometry inside the launcher safe region.

11. Logo background use and misuse

Light backgrounds

Use the full-color logo on:

```
#FFFFFF
#F8FAFC
#F1F5F9
```

Dark backgrounds

Use these options in order:

1. Use the approved dark lockup or white symbol (`resale-lockup-dark.svg` , `resale-logo-mono-white.svg`).
2. Place the full-color logo on a white or light container.
3. Use another specifically approved reversed version.

Do not place the dark teal portions directly on similarly dark backgrounds. Do not recolor individual sections to force a fit.

Photography

Avoid placing the full-color logo directly on visually complex photography. Use a light container or an approved monochrome version with adequate contrast. Never add an arbitrary glow.

Prohibited logo treatments

Do not:

- stretch or compress the logo;
- rotate or mirror it;
- rearrange the four forms;
- replace teal with random blue/green or orange with yellow/red;
- add drop shadows, outlines, bevels, glow, or neon effects;
- insert text or device icons inside the symbol;
- place it inside an unnecessary circle;

- add AI-style glowing circuitry;
- remove a structural section;
- use the literal 器 character instead of the approved symbol;
- repeat the logo as a page background pattern.

For the lockup, also do not:

- drop ".com.pk" or set it larger than "resale";
- remove, move, or recolor the underline or fold, or underline "resale" instead;
- add an orange or coloured full stop, or replace it with a shape;
- retype the wordmark in another font, weight, or capitalization (for example "Resale.com.pk");
- use the full-colour lockup on dark or orange backgrounds;
- put the wordmark inside avatars or app icons (use the symbol alone).

12. Iconography, imagery, and effects

Iconography

Use one consistent icon system. Icons should be geometric, clean, slightly rounded, simple, and consistent in stroke.

Canvas:	24×24
Stroke:	1.75–2px
Joins and caps:	Rounded where appropriate
Default color:	#334155
Active color:	#024E53
Selective accent:	#FD7009

Suitable systems include Lucide or Material Symbols Rounded, provided only one family is used consistently.

Product photography

Use clean backgrounds, accurate colors, sharp details, minimal visual noise, and consistent aspect ratios. Product images should generally appear on #FFFFFF or #F8FAFC. Do not tint products teal or orange. Brand colors frame the product; they do not alter it.

Avoid the AI startup look

Avoid:

- neon blue or purple;
- glowing gradients;

- random sparkles and AI star symbols;
- circuit-board backgrounds;
- generic robot imagery;
- dark cyberpunk layouts;
- glassmorphism everywhere;
- floating glowing orbs;
- excessive blur.

Shadows

```
box-shadow:
  0 1px 2px rgba(15, 23, 42, 0.04),
  0 4px 12px rgba(15, 23, 42, 0.06);
```

Large overlays and modals may use slightly stronger shadows. Do not use heavy black shadows under every card.

13. Navigation, modes, responsive behavior, and motion

Navigation

```
Header background:      #FFFFFF
Header text:            #0F172A
Border:                 #E2E8F0
Active item:            #024E53
Optional active indicator: #FD7009
```

Do not use an orange navigation bar as the default interface.

Light mode

Layer	Recommended token
Page	#F8FAFC
Primary surface	#FFFFFF
Primary text	#0F172A
Muted text	#64748B
Border	#E2E8F0
Primary action	#024E53
Accent	#FD7009

Dark mode

Dark mode is a product mode, not a recolored logo.

- Use a stepped dark-neutral hierarchy instead of pure black everywhere.
- Use high-contrast near-white primary text and quieter secondary text.
- Test interactive teal values against every dark surface before release.
- Keep orange selective. Test Ink/dark text on bright orange and white on #C2410C.
- Preserve semantic success, warning, error, and information meaning with dark-mode-specific contrast testing.
- Use an approved reversed logo or a light-container treatment. Do not place the standard dark teal logo directly on dark surfaces.

Responsive behavior

- Preserve hierarchy across breakpoints.
- Do not hide price, condition, or trust details solely to simplify mobile layouts.
- Allow cards to reflow, stack, or change density while keeping labels close to values.
- Use the mobile type scale and approved spacing tokens instead of proportionally shrinking desktop UI.
- Keep the logo within recommended sizes and switch to the micro mark when required.

Touch targets

Use a minimum 44×44px touch target for essential interactive controls. Visible icons may be smaller inside the target. Provide comfortable separation between adjacent actions.

Motion

- Use motion to clarify state and hierarchy.
- Keep common transitions restrained, generally 150–250ms.
- Use natural easing.
- Do not spin the logo or use glowing loops and continuous decorative motion.
- Respect reduced-motion preferences.

```
@media (prefers-reduced-motion: reduce) {  
  *, *::before, *::after {  
    animation-duration: 0.01ms !important;  
    transition-duration: 0.01ms !important;  
  }  
}
```

14. Figma variable architecture

Create semantic variables rather than applying raw values directly to components. Separate primitive palette values from role-based aliases so modes can change without detaching components.

Collection	Examples
Primitives	<code>color.teal.800</code> , <code>color.orange.600</code> , <code>color.slate.200</code> , <code>space.16</code> , <code>radius.12</code>
Semantic color	<code>surface.page</code> , <code>surface.card</code> , <code>text.primary</code> , <code>text.muted</code> , <code>action.primary</code> , <code>border.default</code>
Component	<code>button.primary.bg</code> , <code>input.focus.border</code> , <code>badge.verified.bg</code> , <code>card.border</code>
Mode	Light and Dark aliases resolved from the same semantic names

- Publish variables from a controlled design-system library.
- Use number variables for spacing, radius, and sizing.
- Name variables by role, not by the screen where they first appeared.
- Do not create one-off local colors when an approved token exists.

15. CSS design tokens

```
:root {  
  --color-brand-teal: #024E53;  
  --color-brand-teal-hover: #013E43;  
  --color-brand-teal-link: #027B7F;  
  --color-brand-orange: #FD7009;  
  --color-brand-orange-text: #C2410C;  
  
  --color-text: #0F172A;  
  --color-text-muted: #64748B;  
  --color-border: #E2E8F0;  
  --color-surface: #FFFFFF;  
  --color-page: #F8FAFC;  
  
  --color-success: #15803D;  
  --color-warning: #B45309;  
  --color-error: #B91C1C;  
  --color-info: #1D4ED8;  
  
  --radius-small: 8px;  
  --radius-control: 10px;  
  --radius-card: 12px;  
  --radius-panel: 16px;  
  --radius-pill: 999px;  
  
  --space-1: 4px;  
  --space-2: 8px;  
  --space-3: 12px;  
  --space-4: 16px;  
  --space-5: 20px;  
  --space-6: 24px;  
  --space-8: 32px;  
  --space-10: 40px;  
  --space-12: 48px;  
  --space-16: 64px;  
  --space-20: 80px;  
  
  --shadow-card:  
    0 1px 2px rgba(15, 23, 42, 0.04),  
    0 4px 12px rgba(15, 23, 42, 0.06);  
}
```

Projects may map these values into framework-specific token systems, but must preserve the semantic meaning and approved values unless a reviewed accessibility requirement demands a mode-specific adjustment.

16. Practical offer-card example

A standard offer card should apply the system as follows:

Element	Applied rule
Surface	White with Slate 200 border and 12px radius
Product image	Neutral background, accurate color, consistent ratio
Product/model	Clear heading without unnecessary accent color
Price	Ink 950, weight 700, tabular figures
Condition	New, Refurbished, or Used token
Seller verification	Teal trust treatment with icon and text label
Savings	Orange Text on white
CTA	Primary teal button with accessible focus ring

17. Asset package

Category	Files	Status
Symbol master	logo/resale-logo-master.svg	Done (v1.1)
Symbol variants	logo/resale-logo-flat.svg , resale-logo-mono-ink.svg , resale-logo-mono-teal.svg , resale-logo-mono-white.svg (+ 512px PNGs)	Done
Lockup (U6)	logo/lockup/ : horizontal, small, dark, on-teal, ink, white, stacked, wordmark-only; SVG (outlined) + 1200px PNG	Done
Favicon	logo/favicon/favicon.svg , favicon.ico (16/32/48), favicon-16/32/48.png	Done
Web app	logo/favicon/apple-touch-icon.png (180), icon-192.png , icon-512.png , icon-maskable-512.png , site.webmanifest	Done
Mobile	logo/app-icon/ios-app-icon-1024.png/.svg ; android-adaptive-foreground(-432).svg/png , android-adaptive-background-432.png	Done
Print	Print-ready PDF/EPS of the lockup in CMYK and Pantone references	Still required (printer to confirm)
Generators	tools/gen-assets.js , tools/trace-mono.js , tools/gen-lockups.js	Re-run after any master change

The original AI-generated raster is kept only as the approved reference image. Do not label exploratory files (previews/brand-preview.html) as production artwork.

18. Governance

- Maintain one approved source package owned by the designated brand or design-system owner.
- Designers, developers, and AI agents must not create ad-hoc recolors, redraws, gradient changes, or simplified marks outside the approved asset process.
- Test every new variant at its intended size and on its intended background before approval.
- Record each change with version, date, owner, reason, and affected assets or tokens.
- Deprecate superseded files clearly and remove them from shared libraries and production repositories.
- Review accessibility whenever a color, typography, component state, or dark-mode value changes.

19. Agent completion checklist

Before considering brand/UI work complete, verify:

- ☐ The approved logo asset and correct variant are used.
- ☐ Where the brand name appears with the symbol, the U6 lockup is used unchanged (".com.pk" present, underline and fold intact, correct light/dark version).
- ☐ Logo size and clear space meet this guide.
- ☐ No ad-hoc logo treatment or brand color was introduced.
- ☐ Components use semantic tokens rather than unexplained raw values.
- ☐ Teal is the primary interaction/trust color.
- ☐ Orange is selective and does not communicate errors or verification.
- ☐ Normal-size white text is not used on #FD7009.
- ☐ Text and interactive elements meet WCAG AA contrast.
- ☐ Keyboard focus is visible.
- ☐ States do not rely on color alone.
- ☐ Touch targets are at least 44x44px where required.
- ☐ Price, condition, seller, verification, warranty, location, and CTA retain a clear hierarchy.
- ☐ Product photography is accurate and is not brand-tinted.
- ☐ Typography, spacing, radius, icons, and shadows follow the system.
- ☐ Responsive layouts preserve important marketplace information.
- ☐ Reduced-motion behavior is supported.
- ☐ New assets and token changes have been documented and approved.

20. Core UI rule

Use teal for trust and primary interaction, orange for selective commercial emphasis, neutrals for content, and semantic colors for system meaning. Never allow brand styling to reduce product clarity, accessibility,

or marketplace information density.

Final design principle

Build a marketplace that feels trustworthy, clear, and distinctly resale.com.pk. Let teal carry confidence, orange add controlled commercial energy, and the product information remain the hero.

Change log

Version	Date	Change
1.3	3 October 2026	Web team requests: header-36 capped at 180px and header-28 at 140px wide; added header-42 (email, 212 × 42) and header-48 (login page). Phones 360–639px use header-36, 320–359px use header-28.
1.2	3 October 2026	Added pixel-fitted header lockups (28–44px, light and dark, 1×/2×/3× PNG) with small-size optical adjustments so the wordmark stays clear in headers. The lockup now uses the detailed full-gradient symbol at every size, including mobile.
1.1	1 October 2026	Approved the U6 "folded underline" lockup (section 2.2) with sizes, versions, and misuse rules. Added the traced SVG symbol master and the full generated asset set (section 17). Updated agent instructions, dark-background order, header guidance, and checklist accordingly.
1.0	1 October 2026	Initial guidelines and approved symbol.
