

Digital Brand and UI Guidelines

resale.com.pk | Web • Mobile • Product Interfaces

VERSION 1.0 / DESIGN HANDOFF

A practical implementation standard for product designers, developers, marketing teams and brand owners.

How to use this guide

This guide translates the approved resale.com.pk symbol into a consistent digital design system. It defines the logo behavior, normalized digital palette, typography, interface components, accessibility requirements and asset production rules required for website and mobile implementation.

The approved mark is the visual source of truth. Color and gradient values in this document are normalized digital palette values derived from the supplied raster artwork; they are not claimed as original vector-source values. A clean vector master remains a production requirement.

Status	Meaning
Approved	The icon-only symbol and its teal/orange visual relationship.
Recommended standard	The UI rules, tokens and usage guidance proposed here for implementation.
Production required	Vector master, flat micro mark, favicon family, app icon assets and approved monochrome artwork.

Contents

Chapter	Coverage
01 Brand foundation	Direction, official logo, production requirement
02 Color system	Brand, neutral, semantic and accessibility palettes
03 Components	Buttons, links, forms, states and marketplace UI
04 Typography and layout	Type, numbers, radius, spacing, cards and navigation
05 Logo system	Clear space, sizing, micro marks, backgrounds and misuse
06 Visual language	Icons, photography, shadows and anti-AI-look guidance
07 Product behavior	Hierarchy, responsive behavior, touch, motion and modes
08 Implementation	Figma variables, CSS tokens and worked example
09 Assets and governance	Package, ownership, version control and approval

**CHAPTER 01**

Brand foundation

Implementation standards for consistent web and mobile experiences

1 Brand direction

resale.com.pk is a technology marketplace for laptops, desktops, servers, phones, tablets, components and accessories across new, refurbished and used conditions.

Attribute	Direction
Trustworthy	Clean, structured and credible
Modern	Contemporary, but not futuristic
Technical	Appropriate for a technology marketplace
Accessible	Easy for mainstream users to understand
Commercial	Strong enough for buying, selling and price comparison
Professional	Suitable for established shops and serious buyers
Friendly	Not corporate or intimidating
Distinctive	Avoid generic marketplace and AI visual clichés

The interface should not look like an AI product, crypto product, gaming product or overly futuristic startup. The logo's interlocking structure can influence modular layouts, rounded geometry and interconnected elements, but should not be copied repeatedly as decoration.

2 Official logo

The approved logo is an icon-only symbol made from four interconnected ribbon-like forms in Resale Teal and Resale Orange. The symbol must remain recognizable independently of text. When the brand name appears beside it, write resale.com.pk in lowercase.

- Do not redraw, rotate, rearrange, stretch, skew or alter the internal geometry.
- Keep the symbol separate from the wordmark; do not insert the name into the icon.
- Use the supplied final raster only as the current visual reference until approved vector masters are produced.

3 Production and vector requirement

Convert the finalized artwork into a clean SVG master before broad production. Preserve the exact silhouette, internal negative spaces, ribbon overlaps, rounded corners, teal/orange relationship, proportions and visual depth. Do not use an AI-generated raster as the source for every favicon, app icon and web size.

CHAPTER 02

Color system

Implementation standards for consistent web and mobile experiences

4 Core brand colors

These values form the normalized digital palette derived from the approved raster logo. Confirm final production values against the future vector master before locking print specifications.

Resale Teal

Token	HEX	RGB	Recommended use
Teal 900	#013E43	1, 62, 67	Deep shadow and pressed states
Teal 800	#024E53	2, 78, 83	Primary brand color
Teal 600	#027B7F	2, 123, 127	Links and highlights
Teal Soft	#E6EDEE	230, 237, 238	Subtle brand background
Teal Soft 2	#CCDCDD	204, 220, 221	Selected and hover backgrounds

Resale Orange

Token	HEX	RGB	Recommended use
Orange 700	#E55106	229, 81, 6	Deep logo orange
Orange 600	#FD7009	253, 112, 9	Primary accent
Orange 500	#FE8D14	254, 141, 20	Highlight and gradient
Orange Soft	#FFF1E6	255, 241, 230	Accent background
Orange Soft 2	#FFE2CE	255, 226, 206	Stronger accent background

Orange Text	#C2410C	194, 65, 12	Accessible orange text on white
-------------	---------	-------------	---------------------------------

Orange is an accent, not the dominant UI color. Use Teal 800 as the main digital brand color.

5 Normalized logo gradients

The logo contains dimensional shading. Reserve gradients for the official full-color mark, large brand graphics, hero illustrations and selected promotional graphics. Use solid brand colors for routine buttons, forms, cards and navigation.

```
TEAL
linear-gradient(135deg, #027B7F 0%, #024E53 55%, #013E43 100%);

ORANGE
linear-gradient(135deg, #FE8D14 0%, #FD7009 55%, #E55106 100%);
```

6 Color hierarchy

Color family	Approximate visual share	Role
White and neutrals	70%	Content, surfaces and whitespace
Teal	20%	Trust, structure and primary interaction
Orange	10%	Commercial emphasis and selective accent

This ratio expresses hierarchy rather than a mathematical requirement. Teal carries primary buttons, active navigation, links, verified states, selections and focus. Orange highlights savings, promotions and small points of commercial emphasis.

7 Neutral UI palette

Token	HEX	RGB	Recommended use
Ink 950	#0F172A		Primary text
Ink 800	#1E293B		Secondary headings
Slate 700	#334155		Secondary text and icons
Slate 500	#64748B		Muted text
Slate 400	#94A3B8		Placeholder and disabled text
Slate 300	#CBD5E1		Strong borders

Slate 200	#E2E8F0		Default borders
Slate 100	#F1F5F9		Secondary backgrounds
Slate 50	#F8FAFC		Page backgrounds
White	#FFFFFF		Cards and main surfaces

8 Semantic colors

Purpose	Main	Soft background	Text
Success	#15803D	#F0FDF4	#166534
Warning	#B45309	#FFFBEB	#92400E
Error	#B91C1C	#FEF2F2	#991B1B
Information	#1D4ED8	#EFF6FF	#1E40AF

Do not use Resale Orange for errors. Orange belongs to the brand and commercial accent system; red communicates errors and destructive actions.

9 Accessibility and contrast

Target WCAG AA as the minimum for website and application interfaces. Do not rely on color alone for state, status or action.

Background	Text	Approx. contrast	Status
#024E53	#FFFFFF	9.47:1	Excellent
#013E43	#FFFFFF	11.86:1	Excellent
#027B7F	#FFFFFF	5.07:1	AA
#FD7009	#0F172A	6.37:1	AA
#FE8D14	#0F172A	7.68:1	AA
#C2410C	#FFFFFF	5.18:1	AA

Do not place normal-size white text on #FD7009. Use Ink 950 text on bright orange. If white text on orange is necessary, use the darker accessible Orange Text value #C2410C.

CHAPTER 03

Components and states

Implementation standards for consistent web and mobile experiences

10 Buttons

Variant	Background	Text	Border	Hover
Primary	#024E53	#FFFFFF	Transparent	#013E43
Secondary	#FFFFFF	#024E53	#024E53	#E6EDEE background
Orange accent	#FD7009	#0F172A	Transparent	#E55106

Use teal for the standard primary CTA such as View Offers, Compare Prices, Contact Seller or Continue. Use orange selectively for promotional or seller-oriented actions. Do not give teal and orange buttons equal visual weight beside each other without a clear hierarchy. Recommended radius: 10px. Recommended weight: 600.

11 Links and focus

Default links use #027B7F and hover to #024E53. Provide an underline on hover or focus where appropriate. Every keyboard-focusable element must have a visible indicator.

```
a { color: #027B7F; }
a:hover { color: #024E53; }

:focus-visible {
  outline: 2px solid #027B7F;
  outline-offset: 2px;
}
```

On teal surfaces, use a white or otherwise contrasting focus ring. Never remove browser focus styling without an accessible replacement.

12 Form controls

State	Background	Border	Text or message
Default	#FFFFFF	#CBD5E1	#0F172A; placeholder #64748B
Hover	#FFFFFF	#94A3B8	#0F172A
Focus	#FFFFFF	#027B7F	Teal focus ring
Error	#FFFFFF	#B91C1C	Message #991B1B

State	Background	Border	Text or message
Disabled	#F1F5F9	#E2E8F0	#94A3B8

13 Marketplace conditions and statuses

Condition	Background	Text	Intent
New	#E6EDEE	#024E53	Trust and freshness
Refurbished	#FFF1E6	#C2410C	Commercial distinction
Used	#F1F5F9	#475569	Neutral condition label

Use both text and color. Do not introduce a new color family for every condition or inventory state.

14 Verified seller

Verification is a trust signal and uses teal: badge background #E6EDEE, icon #024E53 and text #024E53. Use a clear icon plus label such as “Verified Shop.” Do not use orange for verification.

15 Prices and commercial emphasis

Set the actual product price in Ink 950 (#0F172A), normally at weight 700. This keeps price scanning clear on dense listing pages. Use Orange Text (#C2410C) for savings, discount percentage or deal messaging on white—not the brighter logo orange.

16 Badges, chips and selections

Pattern	Default	Selected or active
Filter chip	White; #CBD5E1 border; #334155 text	#E6EDEE background; #024E53 border/text
Radio or checkbox	#CBD5E1 border	#024E53 control; white check
Commercial badge	#FFF1E6 background; #C2410C text	Use sparingly
Status badge	Semantic soft background	Matching semantic text and icon

Selected states should remain obvious without relying only on color. Combine fill or border change with a check, icon, label or control state.

CHAPTER 04

Typography and layout

Implementation standards for consistent web and mobile experiences

17 Product cards

Property	Standard
Background	#FFFFFF
Border	#E2E8F0
Radius	12–16px
Primary text	#0F172A
Secondary text	#64748B
Desktop hover	#CCDCDD border with very small elevation change

Avoid heavy shadows. Product imagery remains the visual focus.

18 Radius system

Component	Radius
Small controls	8px
Inputs and buttons	10px
Standard cards	12px
Large cards and panels	16px
Modals and dialogs	16px
Pills and badges	999px

Echo the logo's rounded ribbon geometry subtly. Do not make every surface excessively rounded; the brand should remain technical and structured.

19 Spacing system

Use a 4px base grid with an 8px preferred rhythm. Approved spacing tokens are 4, 8, 12, 16, 20, 24, 32, 40, 48, 64 and 80px. Avoid arbitrary values unless there is a specific optical reason.

20 Typography

Use Inter Variable where supported. It provides strong screen readability, clear numeric rendering and a practical weight range for marketplace interfaces. Approved weights are 400 Regular, 500 Medium, 600 SemiBold and 700 Bold. Avoid routine use of 800 and 900.

Web scale

Role	Size	Line height	Weight
Display	48px	56px	700
H1	40px	48px	700
H2	32px	40px	700
H3	24px	32px	600
H4	20px	28px	600
Large body	18px	28px	400
Body	16px	24px	400
UI / small	14px	20px	500
Caption	12px	16px	500
Button	14–16px	20–24px	600

Mobile scale

Role	Size	Line height	Weight
H1	32px	40px	700
H2	24px	32px	700
H3	20px	28px	600
Body	16px	24px	400
Small	14px	20px	500
Caption	12px	16px	500

Do not shrink important marketplace information simply to fit more on a screen. Buttons should generally remain at least 14px.

21 Numeric data

Use tabular numbers for prices, comparison tables, RAM and storage values, specifications, offer lists, analytics and seller dashboards.

```
font-variant-numeric: tabular-nums;
```

22 Brand name and header treatment

When the symbol and name appear together, use the construction “[Logo] resale.com.pk”. Set the name in Inter, weight 700, lowercase. The icon must remain capable of functioning independently; never reproduce the name inside the icon.

23 Marketplace information hierarchy

resale.com.pk is information-heavy. Whitespace should improve scanning, not remove useful data. A typical offer card prioritizes product or model, price, condition, seller, verification, warranty, location and CTA—in that order. Usually only one or two card areas need accent color.

24 Navigation

Element	Standard
Header background	#FFFFFF
Header text	#0F172A
Divider	#E2E8F0
Active item	#024E53
Optional active indicator	#FD7009

Do not use an orange navigation bar as the default interface.

CHAPTER 05

Logo system

Implementation standards for consistent web and mobile experiences

25 Clear space

Maintain clear space approximately equal to 12.5% of the logo width on every side. No text, borders, buttons, icons or imagery may enter this zone. When paired with the brand name, maintain enough separation that the symbol does not appear connected to the lettering.

26 Digital sizes

Use	Recommended size
Desktop header	30–36px
Mobile header	28–32px
Compact navigation	24–28px
Footer	28–32px
Account or brand display	40px+
Marketing	As required by layout

Avoid the detailed mark below approximately 24px in ordinary UI. The 16px favicon is a dedicated micro-use case.

27 Micro logo and favicon

Rendered size	Artwork
---------------	---------

Rendered size	Artwork
33px and above	Full gradient version
16–32px	Flat two-color mark: #024E53 and #FD7009; no shadows or micro-gradients
16px test failure	Create a dedicated simplified favicon while preserving the silhouette

Required asset	Size
Favicon	16×16
Favicon	32×32
Favicon	48×48
Apple touch icon	180×180
PWA icon	192×192
PWA icon	512×512

Do not use a blurred downscale of the large raster. Build and test an optimized flat micro symbol.

28 Mobile app icon

Use the symbol only on #FFFFFF or #F8FAFC. The mark should occupy approximately 68–72% of the icon canvas with a generous safe area. For iOS, provide a 1024×1024 master and do not bake in rounded corners. For Android, provide adaptive foreground and background assets and keep essential geometry inside the launcher safe region.

29 Background usage

Context	Rule
Light backgrounds	Use the full-color logo on #FFFFFF, #F8FAFC or #F1F5F9.
Dark backgrounds	Prefer a white or light container. Otherwise use an officially prepared monochrome white or approved reversed mark.
Photography	Avoid direct placement on complex imagery; use a light container or approved monochrome version with adequate contrast.

30 Logo misuse

- Do not stretch, compress, rotate, mirror or rearrange the four forms.
- Do not replace teal with random blue or green, or orange with yellow or red.
- Do not add drop shadows, outlines, bevels, glow or neon effects.
- Do not insert text or device icons inside the symbol.

- Do not place it inside an unnecessary circle or add AI-style glowing circuitry.
- Do not remove a structural section, use the literal 器 character, or repeat the mark as a page background pattern.

CHAPTER 06

Visual language

Implementation standards for consistent web and mobile experiences

31 Iconography

Use one consistent icon family. Icons should be geometric, clean, slightly rounded and simple, with consistent stroke. A 24×24 canvas and 1.75–2px stroke with rounded joins and caps is recommended. Suitable systems include Lucide or Material Symbols Rounded, provided one system is applied consistently.

Role	Color
Default icon	#334155
Active or brand icon	#024E53
Selective accent	#FD7009

32 Photography and product imagery

Product photography should be factual rather than overly stylized: clean backgrounds, accurate colors, sharp details, minimal visual noise and consistent aspect ratios. Place product images on #FFFFFF or #F8FAFC. Do not tint photographs teal or orange; brand colors frame the product, not alter it.

33 Avoid the AI startup look

- Avoid neon blue or purple, glowing gradients, random sparkles and AI star symbols.
- Avoid circuit-board backgrounds, generic robot imagery and dark cyberpunk layouts.
- Avoid glassmorphism everywhere, floating glowing orbs and excessive blur.
- Use the distinctive teal/orange identity, clean product imagery and structured marketplace layouts instead.

34 Shadows

Keep elevation subtle. Large overlays and modals may use slightly stronger shadows, but routine cards should not carry heavy black shadows.

```
box-shadow:  
  0 1px 2px rgba(15, 23, 42, 0.04),  
  0 4px 12px rgba(15, 23, 42, 0.06);
```

35 Core design language

The interface combines neutral content surfaces, teal trust signals and selective orange commercial emphasis. Rounded geometry is controlled, layouts are modular, imagery is factual, and typography is clear. The logo inspires the system through structure—not through repeated decoration.

CHAPTER 07

Product behavior

Implementation standards for consistent web and mobile experiences

36 Light mode

Layer	Recommended token
Page	#F8FAFC
Primary surface	#FFFFFF
Primary text	#0F172A
Muted text	#64748B
Border	#E2E8F0
Primary action	#024E53
Accent	#FD7009

37 Dark mode

Dark mode is a product mode, not a recolored logo. Build it from tested dark neutral surfaces, keep text contrast at WCAG AA, and preserve teal as the primary interaction color only where contrast remains adequate. Use an approved reversed or light-container logo treatment. Do not force the standard dark teal mark directly onto dark surfaces.

Requirement	Guidance
Surfaces	Use a stepped dark-neutral hierarchy rather than pure black everywhere.
Text	Use high-contrast near-white primary text and quieter secondary text.
Teal	Test interactive teal values against each surface before release.
Orange	Keep selective; test Ink or dark text on bright orange and white on #C2410C.

Requirement	Guidance
Semantic states	Retain success, warning, error and information meaning with dark-mode-specific contrast testing.

38 Responsive behavior

- Preserve hierarchy across breakpoints; do not hide price, condition or trust details solely to simplify mobile layouts.
- Allow cards to reflow, stack or change density while keeping labels close to their values.
- Use the mobile typography scale and approved spacing tokens rather than proportionally shrinking desktop UI.
- Keep the logo within the recommended header sizes and switch to the micro mark when required.

39 Touch targets

Use a minimum 44×44px touch target for essential interactive controls and provide comfortable separation between adjacent actions. Visual icons may be smaller inside the target. Ensure hit areas, not only visible shapes, meet the target size.

40 Motion

Motion should clarify state and hierarchy. Keep common transitions short and restrained, generally 150–250ms, using natural easing. Avoid decorative logo spinning, glowing loops or continuous movement. Respect the user's reduced-motion preference and remove non-essential transitions when requested.

```
@media (prefers-reduced-motion: reduce) {  
  *, *::before, *::after {  
    animation-duration: 0.01ms !important;  
    transition-duration: 0.01ms !important;  
  }  
}
```

CHAPTER 08

Implementation

Implementation standards for consistent web and mobile experiences

41 Figma variables

Create semantic variables rather than applying raw colors directly to components. Keep primitive palette values separate from role-based aliases so modes can change without detaching components.

Collection	Examples
Primitives	color.teal.800, color.orange.600, color.slate.200, space.16, radius.12
Semantic color	surface.page, surface.card, text.primary, text.muted, action.primary, border.default
Component	button.primary.bg, input.focus.border, badge.verified.bg, card.border
Mode	Light and Dark aliases resolved from the same semantic names

- Publish variables from a controlled design-system library.
- Use number variables for spacing, radius and sizing; use string styles for typography only where appropriate.
- Name variables by role, not by the screen where they first appeared.
- Do not create one-off local colors when an approved token already exists.

42 CSS design tokens

```
:root {
  --color-brand-teal: #024E53;
  --color-brand-teal-hover: #013E43;
  --color-brand-teal-link: #027B7F;
  --color-brand-orange: #FD7009;
  --color-brand-orange-text: #C2410C;
  --color-text: #0F172A;
  --color-text-muted: #64748B;
  --color-border: #E2E8F0;
  --color-surface: #FFFFFF;
  --color-page: #F8FAFC;
  --radius-control: 10px;
  --radius-card: 12px;
  --space-1: 4px;
  --space-2: 8px;
  --space-4: 16px;
  --space-6: 24px;
  --shadow-card: 0 1px 2px rgba(15,23,42,.04),
    0 4px 12px rgba(15,23,42,.06);
}
```

43 Practical marketplace example

A standard offer card uses a white surface, Slate 200 border and 12px radius. Product title and price use Ink 950; price uses weight 700 and tabular numbers. Condition appears as a labeled chip. Seller verification uses Teal Soft with Teal 800 text and icon. Savings may use Orange Text. The primary CTA uses Teal 800 with white text. The card's image remains color-accurate on a neutral background.

Element	Applied rule
Product image	Neutral background; accurate color; consistent ratio
Model	Clear heading; no unnecessary accent color
Price	Ink 950; 700; tabular figures
Condition	New, Refurbished or Used token
Verified seller	Teal trust treatment
Savings	Orange Text on white
CTA	Primary teal button; accessible focus ring

44 Core UI rule

Use teal for trust and primary interaction, orange for selective commercial emphasis, neutrals for content, and semantic colors for system meaning. Never allow brand styling to reduce product clarity, accessibility or marketplace information density.

CHAPTER 09

Assets and governance

Implementation standards for consistent web and mobile experiences

45 Required asset package

Category	Required files
Master logo	Editable vector master; SVG; print-ready PDF/EPS where required
Digital logo	Full-color SVG and PNG; flat two-color SVG and PNG; approved monochrome and reversed variants
Favicon	16, 32 and 48px optimized micro assets plus favicon.ico

Category	Required files
Web app	Apple touch 180px; PWA 192 and 512px
Mobile	iOS 1024px master; Android adaptive foreground/background assets
Documentation	Color/token source, usage notes, version number and export date

Use clear filenames with brand, asset, variant, color mode, size and version. Example: resale-symbol-flat-color-32-v1.png. Do not label exploratory or AI-generated files as production masters.

46 Governance and ad-hoc variants

- Maintain one approved source package owned by the designated brand or design-system owner.
- Designers and developers must not create ad-hoc recolors, redraws, gradient changes or simplified marks outside the approved asset process.
- Test new variants at intended sizes and on intended backgrounds before approval.
- Record changes with version, date, owner, reason and affected assets or tokens.
- Deprecate superseded files clearly and remove them from shared libraries and production repositories.
- Review accessibility whenever a color, typography, component state or dark-mode value changes.

47 Release checklist

Check	Acceptance requirement
Logo	Approved asset; correct variant, clear space and size
Color	Uses semantic tokens; no unapproved palette values
Accessibility	WCAG AA contrast; visible focus; not color-only
Components	Consistent states, radius, spacing and hierarchy
Responsive	Important marketplace information remains available
Assets	Optimized format and correct export size
Governance	Change documented and approved before release

Final design principle

Build a marketplace that feels trustworthy, clear and distinctly resale.com.pk. Let teal carry confidence, orange add controlled commercial energy, and the product information remain the hero.

APPROVAL AND SIGN-OFF

Role	Name	Signature	Date
